

# My Solar System project on Pluto

*By Maria, again* 🙋

# Pluto ♡

?!`` is pluto still a planet?

♡`` pluto is not a planet anymore due to the fact that it is too small to be one, the minimum is to be big enough to have gravity to force it into a globe-shaped shape.

?!`` can you survive living in pluto?

♡`` no, you cannot survive in pluto, it is about 3.6 billion miles away from the sun which makes it awfully cold, and so you cannot survive there.

?!`` who named pluto??

♡`` Venetia Burney Phair. Venetia was an accountant who taught economics and math in England, she named "Pluto" at the age of 11.

?!`` how small is pluto?

♡`` pluto is about 1,188.3 km.

?!`` how far away is pluto from earth?

♡`` pluto is 5.1622 billion km away from us.

# Pluto.pt2 ♡

?!`` how big is earth compared to pluto?

♡`` pluto is about  $\frac{1}{6}$  the width of earth, if earth was the size of a 5 cent coin pluto would be as “big” as a popcorn kernel.

?!`` when did pluto stop becoming a planet?

♡`` pluto stopped being a planet in 2006.

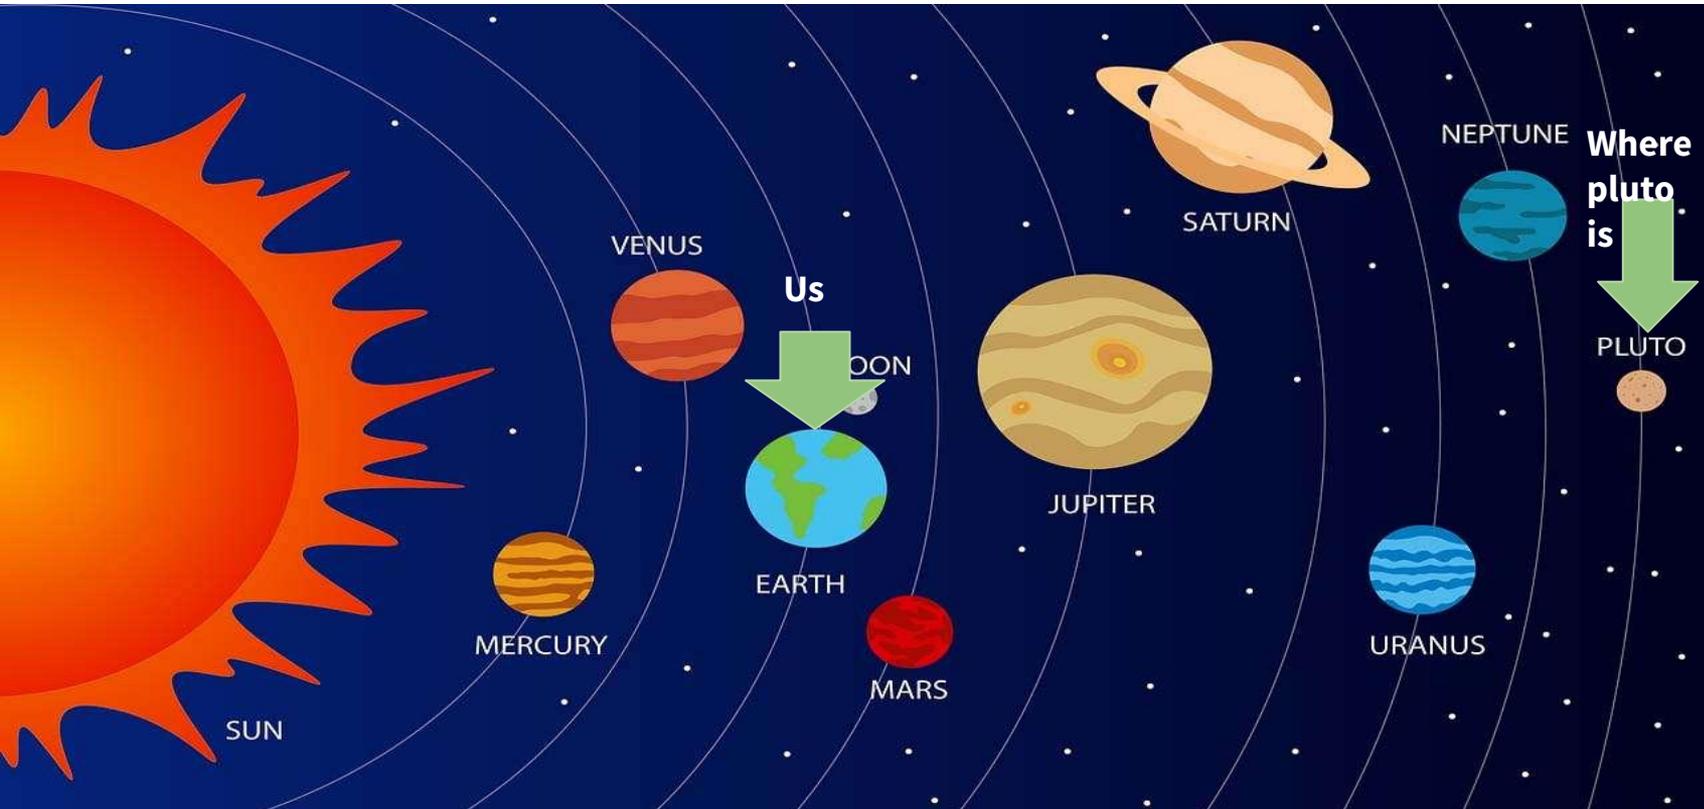

?!`` is pluto bigger than the earth's moon?

♡`` pluto is not bigger than the earth's moon, it is in fact smaller than the earth's moon.

?!`` when was pluto discovered?

♡`` pluto was discovered in 1930 February 18th, 92 years ago.

# Where are we? ♡
